

Order Picker Attachments

Attachment for Order Picker - Order preparation operation or also called order picking as it is more usually known is a method used in warehouse operations and consists of employees referred to as order pickers. The order picker's duty is to take and collect articles in particular quantities in order to accomplish the customer's orders prior to shipment. Order picking is an easy warehousing method. The efficiency in which this particular job is done can be directly related to a supply chain's productivity. Hence, order picking is among the most controlled logistic methods. Order picking falls within the category of the warehouse management system.

There are certain kinds of order picking which comprise: pick to box method, wave picking method, piece picking or picker to part method, zone picking method and sorting systems method.

The pick to box method comprises the order picker just filling the boxes with stuff that are from their particular station. The box then moves on to other stations until the order is complete. In this method, there is no movement of the order picker personnel. In the wave picking method, the order pickers move round to gather the necessary items for some orders. The piece picking or picker to part method is similar where the order pickers or picker move so as to gather the stuff required but for one order only.

In the sorting systems method, there is no movement of the order picking staff. Instead, the products are delivered to him or her by means of an automated system like a conveyor system or an automatic storage. In the zone picking method, every order picker is assigned to one particular area. They are responsible for only realizing order picking within this particular zone.
